May 2007

Two New 10 Series Models

Perfect for Home Theatre and Multi-Zone Systems

RSX-1058 5 x 75 watts A/V receiver with multi-zone capability
RCC-1055 5 disc CD changer with MP3 playback

Rotel Electronics is a family-owned company headquartered in Japan that has been dedicated to designing and manufacturing high-performance, high-quality audio and video components for more than four decades. The company's Balanced Design Concept - a disciplined synthesis of physics, electronics, and mechanical engineering - is evident in each component that is manufactured and distributed throughout the world.

RSX-1058 A/V receiver

Rotel's new RSX-1058 is based upon the proven design platform of the RSX-1057. In addition to the RSX-1057's current operating features, the RSX-1058 adds yet another level of sophistication and functionality, which makes it the perfect one-solution receiver for a whole-house entertainment system. Its features include a high performance video scaler that up-samples and optimizes all video sources (including VCR, satellite, cable and DVD players) for startlingly lifelike picture quality at up to 1080p resolution. Four HDMI inputs and one HDMI output provide advanced connections for newer source components and TV monitors.

Multi-room audio capability has also been added to the RSX-1058. The receiver has provisions for adding up to four zones of audio with the use of optional keypads and a power supply. The keypads make available remote access of the most used features of the tuner, CD player or other source component, as well as volume, mute, and on/off, from anywhere in the home.

Rotel's RSX-1058 is the home entertainment solution for those who demand a high level of performance and functionality without the expense and complexity of separate, multi-component, home theatre and multiroom audio systems.

Key Features Include The following Highlights:

- Rotel's Balanced Design Concept combines advanced circuit board layout, comprehensive parts evaluation, and extensive listening tests for superior sound and long-term reliability.
- Five built-in amplifier channels, each delivering 75 watts (all channels driven).
- Dolby® Pro Logic IIx® decoding (for 5.1, 6.1, and 7.1 channel systems) with improved separation and frequency response for Dolby Surround® matrix encoded recordings. It can be optimized for Music or Cinema sources, Pro Logic® or Games.
- Automatic Dolby Digital® decoding Dolby Digital® 2.0, Dolby Digital® 5.1, and Dolby Digital Surround EX® recordings.
- Automatic decoding for DTS® 5.1 channel, DTS-ES® Matrix 6.1 channel, DTS-ES® Discrete 6.1 channel, and DTS 96/24 digital recordings.
- Rotel XS (eXtended Surround) automatically ensures proper decoding and optimum performance from any multichannel digital signal on 6.1 and 7.1 channel systems. Always active in any system with centre back speaker(s), Rotel XS even works with signals that would not otherwise activate the proper decoding (such as non-flagged DTS-ES and Dolby Surround EX discs) or for which there is no extended surround decoder (such as DTS 5.1, Dolby Digital 5.1, and even Dolby Pro Logic II decoded Dolby Digital 2.0 recordings).
- DTS® Neo:6® Surround modes for deriving surround channels for 5.1, 6.1 or 7.1 channel systems from 2-channel stereo or matrix surround recordings. It can be optimized for Music or Cinema sources.
- Automatic HDCD® decoding for signals from High Definition Compatible Digital® CDs.
- DVD-A high-resolution multichannel audio signals are automatically detected when using an HDMI input connection.
- Surround modes for playback of surround sound material on 2 channel and 3 channel systems for total compatibility.
- Automatic decoding of digital signals from MP3 players. (MPEG-1 Audio Layer 3).
- Analogue input and output video connections for use with Composite video, S-Video, and Component Video signals, including conversion to Component Video output.
- HDMI (Ver. 1.1) switching for digital video signals up to 1080p and downscaling from 1080i to 480p/576p. Compatible with DVI components with a HDMI-DVI adapter.
- Optical digital, coax digital, and analogue input and output audio connections.
- AM/FM tuner with 30 station presets, direct access tuning, and auto-tuning.
- RDS (Radio Data Systems) and RBDS (Radio Broadcast Data Service) capability.
- Zone 2, 3, and 4 outputs with independent input selection and volume adjustments for multi-zone custom installations along with IR-repeater capability for operation from the remote zone.
- MULTI Input for outboard adapter and future upgradeability.
- User friendly ON-SCREEN DISPLAY with programmable labels for video components. Choice of languages.
- Universal learning remote control to operate the RSX-1058 and other components.
- Upgradeable microprocessor software to accommodate future upgrades.

European Retail Price:

RSX-1058	Europe	€2,000
	UK	£1,500
	Denmark	Kr 15,999
	Norway	Kr 16,995
	Sweden	Kr 20,000

Availability: June 2007

RCC-1055 5 disc CD changer

The RCC-1055 is a full featured, high performance 5 disc CD changer. It is the ideal choice for those who want the convenience of a CD changer, but who will not accept

compromised sound quality. The RCC-1055 utilizes an oversized EI core transformer and features high precision 8-times over sampling digital filters, premium grade DACs, HDCD circuitry, the highest quality components, such as metal film resistors and polystyrene or polypropylene capacitors in important signal paths, and a high current analogue output stage all add up to result in dynamic and accurate playback of CDs or CDRs. In addition, the RCC-1055 can play MP3 encoded discs (Each disc can hold up to 999 individual tracks).

Ease of operation has not been forgotten. While one disc is playing you can change any of the other four. Full remote control, 32 track programming, and track scanning are provided.

All aspects of this design have been examined with the final goal being faithful reproduction of music.

The RCC-1055 is easy to install and use. The inclusion of RS232 control, IR repeater and a 12-volt trigger allows the RCC-1055 to be easily integrated into multi-room systems.

European Retail Price:

RCC-1055	Europe	€750
	UK	£500
	Denmark	Kr 5,999
	Norway	Kr 6,295
	Sweden	Kr 7,500

High and low resolution images of the RSX-1058 and RCC-1055 are available for you to use in your local communications by downloading from [Clarity](#).

Ordering

These new models will be listed on your June POF so please ensure that you indicate your initial orders / forecasts. Alternatively, please let our Country Customer Service Desk know your requirements.

Please note that the RSX-1058 does NOT replace the RSX-1057.

HDMI -
What You Need to Know

HDMI - What You Need to Know

Please have a read of the article written by Rotel America (left). It gives a detailed update on all the issues surrounding HDMI. You should also ensure that your sales teams and dealers get a copy.

The InDesign files will shortly be made available to download on [Clarity](#) so you can drop in your own language translation for printing and distribution in your market.
